

Jofred Cayabyab

jofred.cayabyab1@ucalgary.ca • (403) 891-9552 • github.com/JCayabyab • jcayabyab.com

Skills

Languages: JavaScript, Java, C++, C, SQL, HTML, CSS, Python, VB.NET, MATLAB

Tools and Technologies: React, Redux, Node.js, Express, MySQL, Oracle, MongoDB, UiPath, Git

Education

University of Calgary

Sep 2017 – May 2022

- Bachelor of Science in Software Engineering

GPA: 3.96/4

Relevant Coursework: Data Structures and Algorithms, Principles of Software Development (OOP), Computer Organization (Assembly), Software Architecture and Design Patterns

Experience

Code the Change YYC [Director of Technology & Project Lead](#)

Nov 2019 - Present

- Oversee the development of four open-source tech projects for local non-profit organizations
- Lead a team of 6 students in creating an NLP model to classify and categorize critical incident reports
- Organize and instruct learning workshops for less experienced software developers
- Created and organized a technical application/interview process for over 40 applicants
- Improved participant efficiency at a hackathon with ~40 participants by creating boilerplate projects in **React** and **Java**

Encana [Student System Analyst](#)

May 2019 – Aug 2019

- Saved 30 hours per month of repetitive data-entry work by automating multiple administrative processes using **UiPath** and **FME**
- Designed multiple RPA processes using **UiPath**, including an automatic document downloader and a login checker
- Eliminated invoice processing error rates by 100% by writing an invoice parsing RPA in **UiPath**
- Streamlined asset management by creating interactive report generation software with **Oracle PL/SQL** scripts

Student Organization for Aerospace Research [Software Developer](#)

Sep 2018 – May 2019

- Implemented automatic parachute deployment by programming sensors and equipment on STM32 microcontrollers
- Implemented malformed packet recovery by developing a byte-stuffing algorithm in **C**, reducing system failure rates by 50%
- Improved testing and debugging workflow of avionics software with a **Python** program for simulating ground systems signals

Projects

datespot datespot.surge.sh

Nov 2018

- Developed a web application using the **Google Maps API** to recommend date locations to users

Technical skills gained/improved: **React**, **Redux**, **JavaScript**

CrowdBrain crowdbrain.herokuapp.com

Aug 2018 – Sep 2018

- Designed an application allowing interaction between developers and their userbase through a project sharing interface
- Implemented an **Express** RESTful API allowing users to provide feedback on shared project features through commenting
- Implemented seamless user login through **Google OAuth** and **Passport.js**

Technical skills gained/improved: **MongoDB**, **Node.js**, **Express**, **React**, **Redux**
